

Gadella

Gadella is a genus of morid cod. The species in this genus are characterised by the absence of a chin barbell, an anterior dorsal fin with 7-11 rays, a long based anal fin which has a straight profile, the outermost rays of the pelvic fin are filamentous and extend a small distance beyond the membrane. They do not have a photophore. The *Gadella* codlings are found around the tropical and subtropical seas around the world on the outer continental shelf to the mid continental slope. They are of no interest to fisheries.^[2]

Species

The currently recognized species in this genus are:^[3]

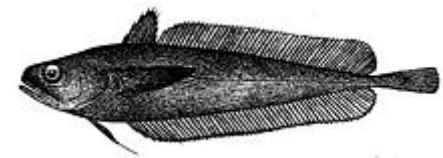

- *Gadella brocca* Paulin & C. D. Roberts, 1997
- *Gadella dancoheni* Sazonov & Shcherbachev, 2000
- *Gadella edelmanni* (A. B. Brauer, 1906)
- *Gadella filifer* (Garman, 1899)
- *Gadella imberbis* (Vaillant, 1888) (beardless codling)
- *Gadella jordani* (J. E. Böhlke & Mead, 1951) (Jordan's cod)
- *Gadella macrura* Sazonov & Shcherbachev, 2000 (longtail cod)
- *Gadella maraldi* (A. Risso, 1810) (gadella)
- *Gadella molokaiensis* Paulin, 1989
- *Gadella norops* Paulin, 1987
- *Gadella obscurus* (Parin, 1984)
- *Gadella svetovidovi* Trunov, 1992
- *Gadella thysthlon* Long & McCosker, 1998
